**Technologies:** C#.NET, Microsoft.NET platform, MS SQL Server 2000

[Details.](#)

## Technologies

What are main advantages of .NET as a development platform? Microsoft .NET framework is currently available on Microsoft proprietary Windows platform, which takes about 90 % of the operating systems market. NET framework includes many libraries and components facilitating and streamlining development process. Microsoft .NET is a platform of choice for thousands small and medium companies and large enterprises across the world.

Here is the partial list of technologies that we use:

**Microsoft Visual C# .NET** - is an integrated development environment (IDE) product engineered by Microsoft for the C, C++, and C++/CLI programming languages.

**MS SQL Server** is a relational database management system (RDBMS) produced by Microsoft.

**Microsoft Internet Information Services (IIS; formerly called Server)** is a set of Internet-based services for servers using Microsoft Windows.

**Transact-SQL** is Microsoft's and Sybase's proprietary extension to the SQL language.

**ADO.NET** is a set of computer software components that can be used by programmers to access data and data services.

**ASP.NET** is a web application framework marketed by Microsoft.

**Windows Forms (WinForms)** is the name given to the graphical user interface application programming interface (API) included as a part of Microsoft's .NET Framework, providing access to the native Microsoft Windows interface elements by wrapping the existing Windows API in managed code.

**Microsoft Visual Studio .NET** is Microsoft's flagship software development product for computer programmers. It centers on an integrated development environment which lets programmers create standalone applications, web sites, web applications, and web services that run on any platforms supported by Microsoft's .NET Framework

For complete list of technologies please see Softage [.NET technologies list](#).

## About Softage .NET team

Since the inception Softage formed a specialized .NET programming team to meet a growing demand for outsourcing .NET application development. Softage .NET team developers have solid educational background with bachelor and master degrees from leading Russian universities and rich work experience in .NET technologies (3 years+).
